

Closing Notes

Amos Azaria

What we've learned...

- I believe that we have learned a lot in this course.
- The material we learned is essential knowledge for any software developer.

Databases and Data!

- While most of the other universities focus merely on standard relational database management system, we have learned, in addition, a lot about data in general.
- I hope that you have enjoyed the course!

Follow-up Courses

- If you have enjoyed the last few lessons (machine learning) you may be interested in:
 - taking my own course about deep learning and NLP (given in the first semester).
 - taking Liad's course on Machine learning (given in the second semester).
 - I'll also be happy to advise you for your final project, or if you would like to continue on to a master's degree.
- If you have enjoyed the part about big-data (NoSQL / Spark etc.), you may be interested in taking the big-data course.
- There also is a course about data mining and image processing.

Thank you and good luck on all
your exams!
